Test Case / Original Request

Run test case PTC-004 using Jmeter, monitor it, analyze the results, and generate the final PDF report with links to the native JMeter report and raw results.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Filtered Feedback API — Load Check
Job ID: JOB-4ca47168b3b443378d1d27c80057646c
Overall Result: WARNING

The job completed successfully and passed most thresholds, but outlier latency spikes were detected with a max response time significantly greater than the p95. Infrastructure health is in a warning state due to high memory usage on the load generator. There were no security results provided for this run. Monitoring, performance, and time-series all indicate generally stable operation outside the noted latency anomalies.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: jmeter

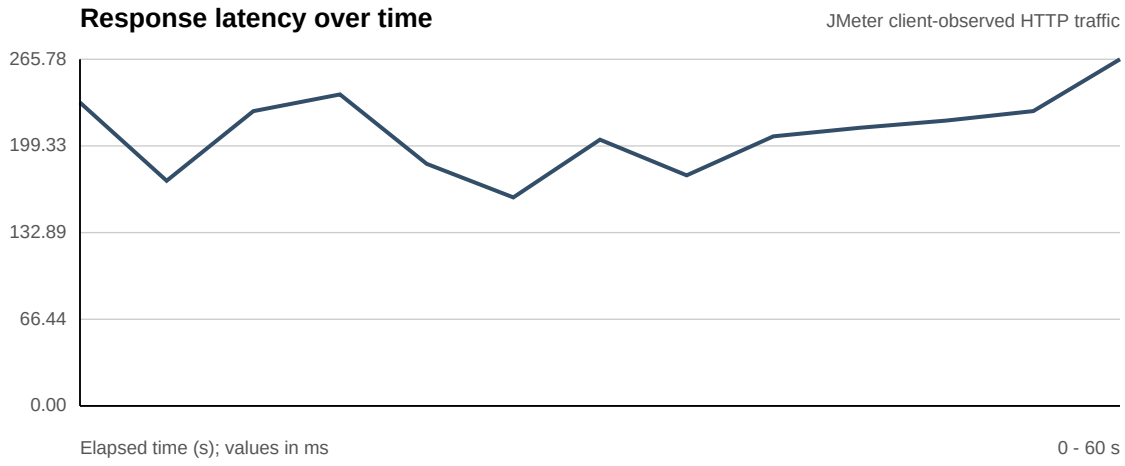
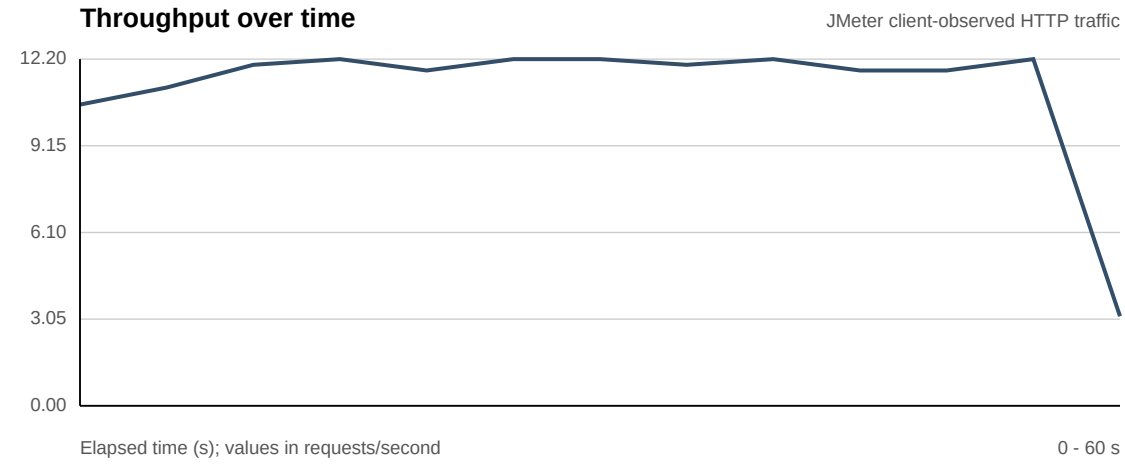
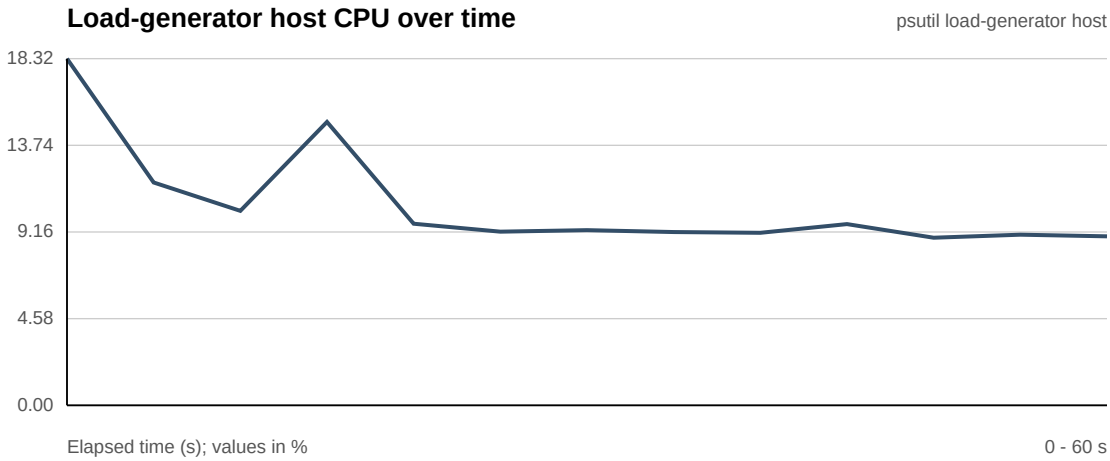
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /comments?postId=1 (Unknown - Filtered Feedback API — Load Check). Results: 720 total requests, 720 successful, 0 failed. Avg response time: 205.78472222222223 ms; 95th percentile: 435.0 ms; Max: 2728.0 ms. Throughput: 11.454968555016693 TPS; Error rate: 0.0%. Latency percentiles (ms): p50=106.0, p90=329.0, p95=435.0, p99=1499.0
Monitoring	CPU usage: 10.55% average, 24.0% peak; memory: 79.4% average, 81.4% peak; DB connections: not collected, TPS: 11.454968555016693, Response time: 205.78472222222223 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). Alerts triggered: ['High load-generator host memory usage']
Security Validation	Security validation was not run for this job.
Analysis	The job completed successfully and passed most thresholds, but outlier latency spikes were detected with a max response time significantly greater than the p95. Infrastructure health is in a warning state due to high memory usage on the load generator. There were no security results provided for this run. Monitoring, performance, and time-series all indicate generally stable operation outside the noted latency anomalies.

Agent	*Summary*
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /comments?postId=1 [WARNING / medium]
avg=205.78472222222223ms p95=435.0ms max=2728.0ms throughput=11.454968555016693 req/s error_rate=0.0% http_status=200
* Max response time (2728.0ms) is 6.3x p95 (435.0ms) -- outlier spikes present.
history: Historical comparison context was unavailable, so this finding is based solely on the detected threshold breach.
recommendation: Monitor for further occurrences of outlier latency spikes that breach the max:p95 ratio threshold. If this becomes a recurring issue, consider collecting additional data for root cause analysis.

Infrastructure Health (Monitoring)

Status: WARNING (monitoring_agent reported: WARNING)
CPU usage: 10.55% Memory usage: 79.4% DB connections: None TPS: 11.454968555016693
Response time (monitoring): 205.78472222222223ms
- 1 monitoring alert(s) reported: ['High load-generator host memory usage']
Monitoring alerts: ['High load-generator host memory usage']

Recommended Next Steps

- /comments?postId=1: Monitor for further occurrences of outlier latency spikes that breach the max:p95 ratio threshold. If this becomes a recurring issue, consider collecting additional data for root cause analysis.
- Infrastructure: review CPU/memory/DB connection anomalies above.
