Test Case / Original Request

Run test case PTC-003 using k6, monitor it, analyze the results, and generate the final PDF report with links to the native JMeter report and raw results.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL k6 execution completed. Threshold breaches, if any, are retained as performance findings.
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Content Feedback API — Load Check
Job ID: JOB-6007365eccd3437885b6be55dfbe2e2f
Overall Result: FAIL

This performance test run detected critical failures for the '/posts/1/comments' API, with error rate and max response time breaching defined thresholds. Time series analysis revealed a 309% latency increase and error rate spikes post-ramp-up, while host monitoring reported warnings primarily due to high memory usage on the load generator. Security analysis was not performed for this run. Review the observed breaches and host alerts to guide remediation.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: k6
- target_url: https://jsonplaceholder.typicode.com
- endpoint: /posts/1/comments
- method: GET
- users: 15
- max_rps: 10
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000
Artifact directory: src/generated_scripts/k6 native reports/JOB-6007365eccd3437885b6be55dfbe2e2f

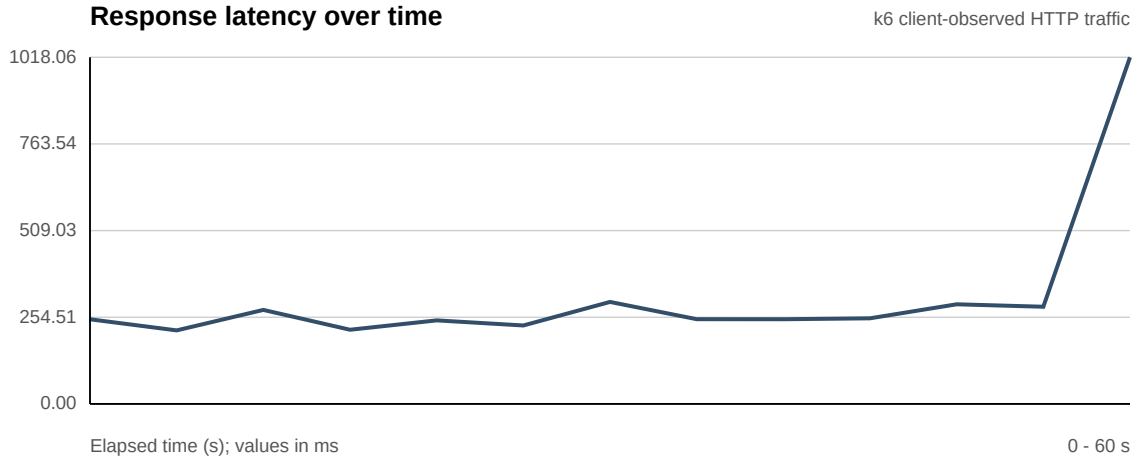
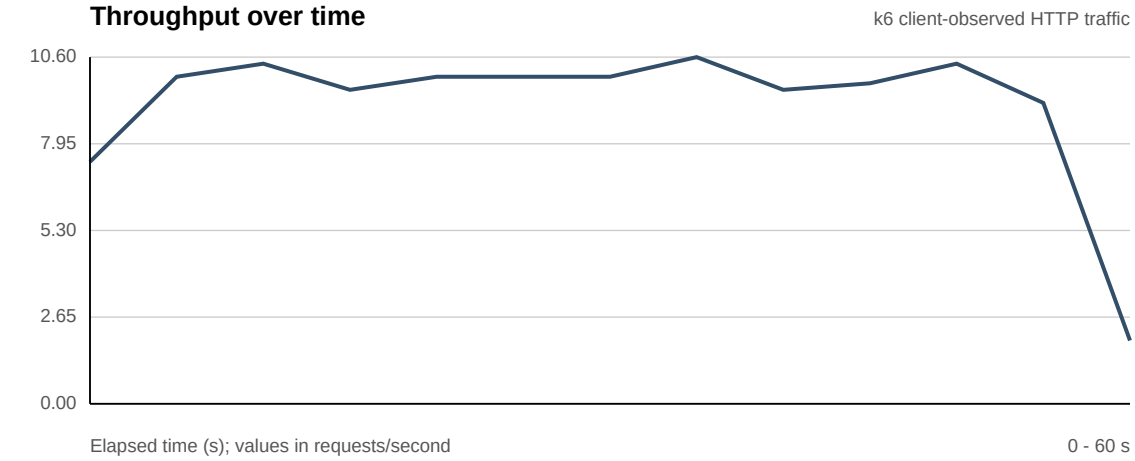
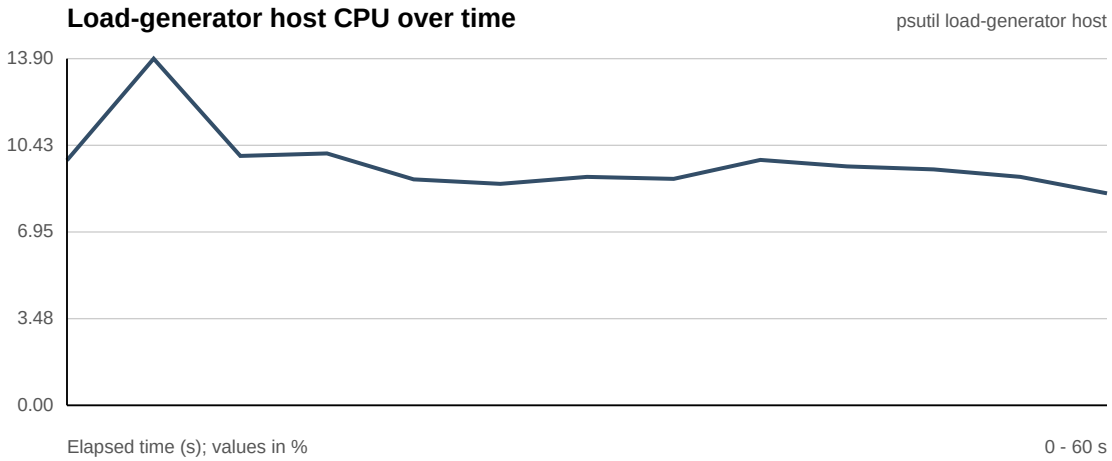
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /posts/1/comments (Unknown - Content Feedback API — Load Check). Results: 587 total requests, 586 successful, 1 failed. Avg response time: 257.9288245315161 ms; 95th percentile: 431.31649999999934 ms; Max: 2679.54 ms. Throughput: 9.62472350440282 TPS; Error rate: 17.04%.
Monitoring	CPU usage: 9.81% average, 22.7% peak; memory: 78.51% average, 80.3% peak; DB connections: not collected, TPS: 9.62472350440282, Response time: 257.9288245315161 ms. Data source and scope: REAL: psutil load-generator host samples and k6 client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=k6 (load_generator_observed_http_traffic); tps=k6 (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.). Alerts triggered: ['High load-generator host memory usage']
Security Validation	Security validation was not run for this job.
Analysis	This performance test run detected critical failures for the '/posts/1/comments' API, with error rate and max response time breaching defined thresholds. Time series analysis revealed a 309% latency increase and error rate spikes post-ramp-up, while host monitoring reported warnings primarily due to high memory usage on the load generator. Security analysis was not performed for this run. Review the observed breaches and host alerts to guide remediation.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /posts/1/comments [FAIL / critical]
avg=257.9288245315161ms p95=431.31649999999934ms max=2679.54ms
throughput=9.62472350440282 req/s error_rate=17.04% http_status=200
* Error rate 17.04% exceeds 1.0% threshold.
* Max response time (2679.54ms) is 6.2x p95 (431.31649999999934ms) -- outlier spikes present.
history: Historical context unavailable (RAG/data module not found). This is an observed static threshold breach.
recommendation: Review application error rates and investigate outlier response times. This API violated one or more critical thresholds in this run, and context from previous jobs is unavailable. Compare with thresholds/baseline in your SLAs and investigate as needed.

Infrastructure Health (Monitoring)

Status: WARNING (monitoring_agent reported: WARNING)
CPU usage: 9.81% Memory usage: 78.51% DB connections: None TPS: 9.62472350440282 Response time (monitoring): 257.9288245315161ms
- 1 monitoring alert(s) reported: ['High load-generator host memory usage']
Monitoring alerts: ['High load-generator host memory usage']

Recommended Next Steps

- /posts/1/comments: Review application error rates and investigate outlier response times. This API violated one or more critical thresholds in this run, and context from previous jobs is unavailable. Compare with thresholds/baseline in your SLAs and investigate as needed.
- Infrastructure: review CPU/memory/DB connection anomalies above.
