Test Case / Original Request

Run test case PTC-008 using k6, monitor it, analyze the results, and generate the final PDF report with links to the native JMeter report and raw results.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL k6 execution completed. Threshold breaches, if any, are retained as performance findings.
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Recipe Details API — Load Check
Job ID: JOB-61af9bee06504538a23df28c3f37b73c
Overall Result: WARNING

Performance testing for the Recipe Details API completed successfully, with all requests returning HTTP 200 and no errors. However, rare high-latency spikes were observed, as the maximum response time was significantly higher than the 95th percentile, warranting review for transient outlier delays. Infrastructure health was excellent, with low CPU usage and moderate memory consumption; no alerts or anomalies were detected on the monitored host. No security test results were provided for this run.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: k6
- target_url: https://dummyjson.com
- endpoint: /recipes/1
- method: GET
- users: 80
- max_rps: 10
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000

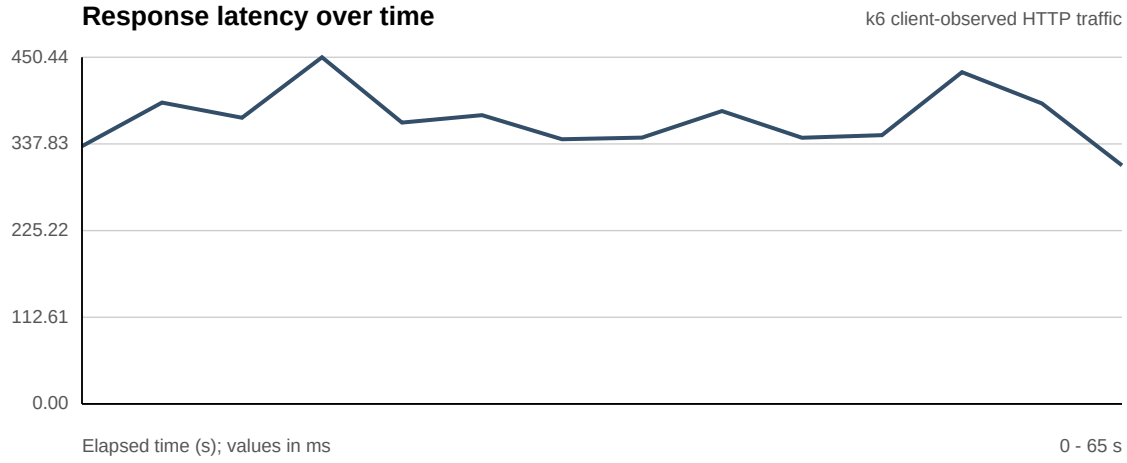
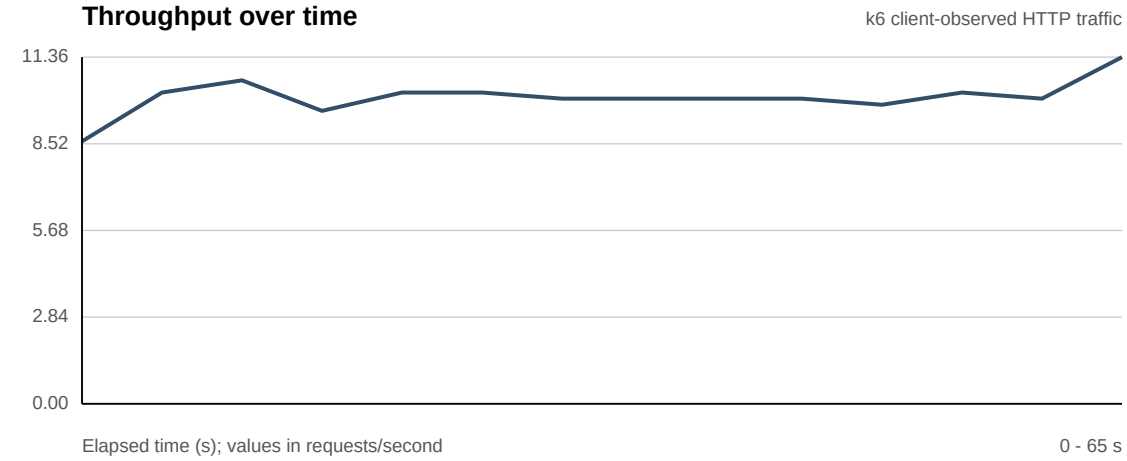
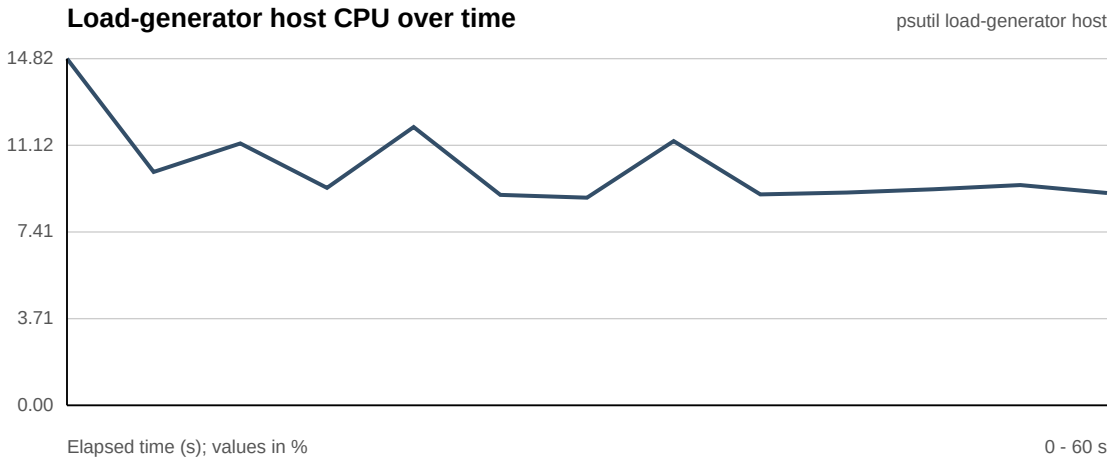
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /recipes/1 (Unknown - Recipe Details API — Load Check). Results: 649 total requests, 649 successful, 0 failed. Avg response time: 375.2458505392915 ms; 95th percentile: 501.3787999999999 ms; Max: 2264.358 ms. Throughput: 9.964908475002652 TPS; Error rate: 0.0%.
Monitoring	CPU usage: 10.1% average, 20.3% peak; memory: 78.51% average, 80.0% peak; DB connections: not collected, TPS: 9.964908475002652, Response time: 375.2458505392915 ms. Data source and scope: REAL: psutil load-generator host samples and k6 client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=k6 (load_generator_observed_http_traffic); tps=k6 (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.). No alerts triggered.
Security Validation	Security validation was not run for this job.
Analysis	Performance testing for the Recipe Details API completed successfully, with all requests returning HTTP 200 and no errors. However, rare high-latency spikes were observed, as the maximum response time was significantly higher than the 95th percentile, warranting review for transient outlier delays. Infrastructure health was excellent, with low CPU usage and moderate memory consumption; no alerts or anomalies were detected on the monitored host. No security test results were provided for this run.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /recipes/1 [WARNING / medium]
avg=375.2458505392915ms p95=501.3787999999999ms max=2264.358ms
throughput=9.964908475002652 req/s error_rate=0.0% http_status=200
* Max response time (2264.358ms) is 4.5x p95 (501.3787999999999ms) -- outlier spikes present.
history: No historical context or RAG incident/SLA data available; analysis is based solely on static threshold breach (max response time substantially exceeds p95, indicating high-latency outlier spikes).
recommendation: Review recent deployments and logs to investigate possible transient spikes or underlying system bottlenecks that could cause rare, extreme response delays. Since no historical or incident documentation was found, confirm with operations if this pattern is new.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 10.1% Memory usage: 78.51% DB connections: None TPS: 9.964908475002652
Response time (monitoring): 375.2458505392915ms

Recommended Next Steps

- /recipes/1: Review recent deployments and logs to investigate possible transient spikes or underlying system bottlenecks that could cause rare, extreme response delays. Since no historical or incident documentation was found, confirm with operations if this pattern is new.
