Executive Summary

Application: Core Banking
Scenario: Core Banking Performance Test
Job ID: JOB-37ec459a
Overall Result: FAIL

The Core Banking Performance Test encountered a critical failure: the reported error rate reached 99%, far exceeding the 1.0% threshold. While other performance metrics such as response times and throughput are within expected ranges, this extremely high error rate signals a serious issue affecting reliability. No historical context was available to compare this result; immediate investigation into backend errors or configuration problems is recommended. No monitoring or security results were provided for this job.

Per-API Findings (Test Execution)

- unknown [FAIL / critical]
avg=665.07ms p95=852.91ms max=1114.22ms throughput=376.08 req/s error_rate=99.0% http_status=200
* Error rate 99.00% exceeds 1.0% threshold.
history: No historical data or prior incidents are available for this application/scenario/API at this time. Analysis is based solely on current threshold breach.
recommendation: The error rate far exceeds the accepted threshold (1.0%). Immediate investigation is recommended to identify root causes and to compare with past runs once data is available. Check for deployment changes, backend failures, or misconfiguration that could drive such a high error rate.

Recommended Next Steps

- unknown: The error rate far exceeds the accepted threshold (1.0%). Immediate investigation is recommended to identify root causes and to compare with past runs once data is available. Check for deployment changes, backend failures, or misconfiguration that could drive such a high error rate.
