Executive Summary

Application: Internet Banking
Scenario: Net Banking API
Job ID: JOB-3335c272
Overall Result: FAIL

Test execution found a high error rate (1.21%), exceeding the acceptable threshold of 1.0% for the Net Banking API scenario. Infrastructure health was reported as OK with no active alerts, but there is a significant disagreement between monitoring and test execution response times, which may merit further investigation. No security findings were available for this analysis.

Per-API Findings (Test Execution)

- Net Banking API [FAIL / high]
avg=892.97ms p95=1199.42ms max=1397.34ms throughput=299.51 req/s error_rate=1.21% http_status=200
* Error rate 1.21% exceeds 1.0% threshold.
history: Unable to retrieve historical or runbook context for this API/scenario; analysis based on observed threshold breach only.
recommendation: The error rate (1.21%) is above the 1.0% threshold. Investigate recent code changes, backend dependencies, and error logs for root cause. No relevant SLA, runbook, or past incident context was available from the system.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 61.67% Memory usage: 66.08% DB connections: 151.92 TPS: 156.92 Response time (monitoring): 466.25ms
Cross-check: monitoring_agent's response_time (466.25ms) disagrees with test_execution_agent's avg_response_time (892.97ms) by 48% -- worth checking measurement points/clock sync.

Recommended Next Steps

- Net Banking API: The error rate (1.21%) is above the 1.0% threshold. Investigate recent code changes, backend dependencies, and error logs for root cause. No relevant SLA, runbook, or past incident context was available from the system.
