Executive Summary

Application: Core Banking
Scenario: Core Banking Transactions
Job ID: JOB-f5442e1f
Overall Result: FAIL

Performance testing for Core Banking API detected a high error rate (1.74%), exceeding the 1.0% threshold and calling for detailed investigation. Infrastructure monitoring reported healthy CPU, memory, and connection usage, with no infra alerts at the time of the test. There is a notable 38% gap between infra and test-execution response times, suggesting a need to validate measurement points or clock synchronization. No relevant historical context was available, so findings rely on static thresholds only.

Per-API Findings (Test Execution)

- Core Banking API [FAIL / high]
avg=749.19ms p95=1066.3ms max=1432.73ms throughput=199.05 req/s error_rate=1.74% http_status=200
* Error rate 1.74% exceeds 1.0% threshold.
history: Historical context unavailable; assessment is based solely on breach of the 1.0% error rate threshold.
recommendation: Investigate causes for error rate above 1.0%. Review logs for anomalies or specific error patterns. Conduct root-cause analysis and, if spike is persistent, coordinate with development to address reliability issues.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 61.67% Memory usage: 66.08% DB connections: 151.92 TPS: 156.92 Response time (monitoring): 466.25ms
Cross-check: monitoring_agent's response_time (466.25ms) disagrees with test_execution_agent's avg_response_time (749.19ms) by 38% -- worth checking measurement points/clock sync.

Recommended Next Steps

- Core Banking API: Investigate causes for error rate above 1.0%. Review logs for anomalies or specific error patterns. Conduct root-cause analysis and, if spike is persistent, coordinate with development to address reliability issues.
