Test Case / Original Request

Use JMeter to run PTC-004. Observe the run, assess the configured endpoint’s security surface, analyze the results from this job, and create a linked PDF report.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Filtered Feedback API — Load Check
Job ID: JOB-22d21f9106344aa2b6a57392a842ef30
Overall Result: WARNING

The test run completed successfully with no functional errors and consistent infrastructure performance. However, a latency warning was triggered due to high response time outliers—max response time was 2.5x higher than p95, indicating occasional spikes. Infrastructure health was stable with low CPU and moderate memory usage. Security assessment returned a warning due to the absence of any configured or assessed controls; no runtime checks were performed. No relevant historical run or incident context was available.

Execution Profile and Artifacts

Execution mode: REAL

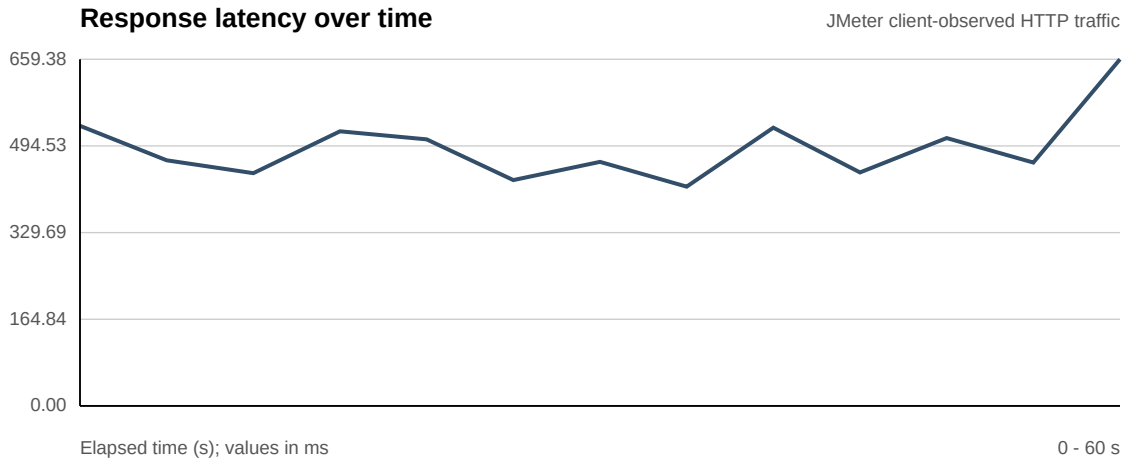
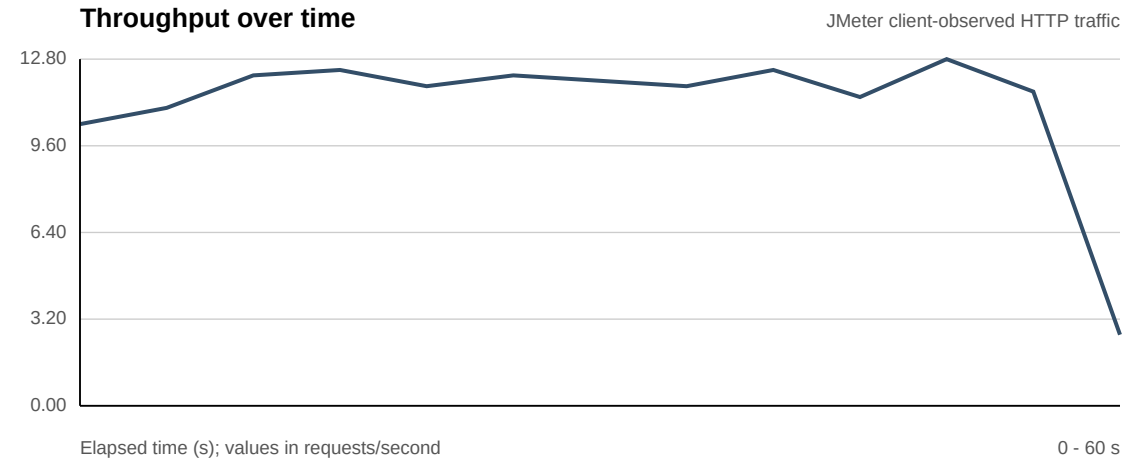
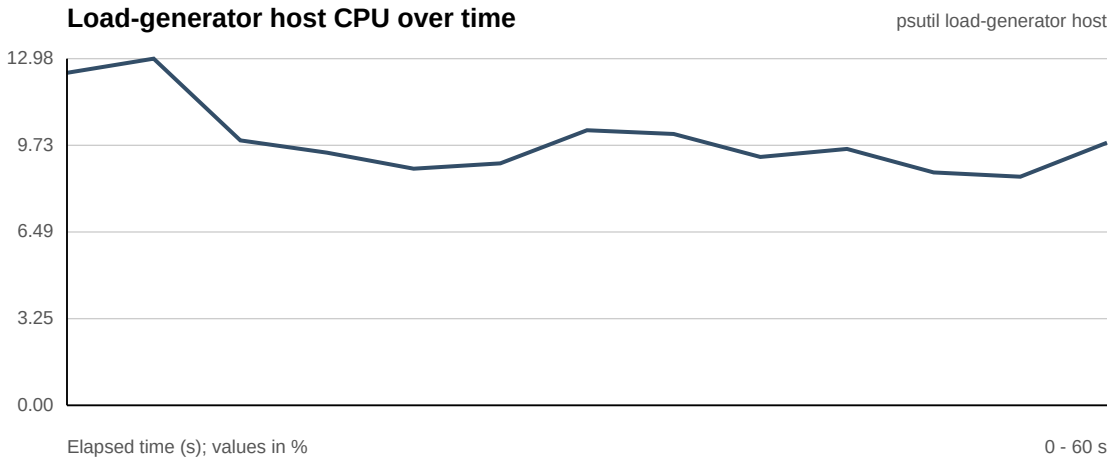
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /comments?postId=1 (Unknown - Filtered Feedback API — Load Check). Results: 718 total requests, 718 successful, 0 failed. Avg response time: 479.424791086351 ms; 95th percentile: 1382.0 ms; Max: 3502.0 ms. Throughput: 11.391156111911029 TPS; Error rate: 0.0%. Latency percentiles (ms): p50=303.0, p90=1149.0, p95=1382.0, p99=2125.0
Monitoring	CPU usage: 9.9% average, 19.2% peak; memory: 66.35% average, 67.7% peak; DB connections: not collected, TPS: 11.391156111911029, Response time: 479.424791086351 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). No alerts triggered.

Agent	*Summary*
Security Validation	Status: WARNING. Security score: N/A. Live security check: not requested. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: No security control was selected from the objective; no control was assessed. Control coverage: {'requested_count': 0, 'assessed_count': 0, 'not_assessed_count': 0} Assessment limitations: - No security control was selected from the objective; no control was assessed. - No runtime security checks were performed; results describe configuration declarations only.
Analysis	The test run completed successfully with no functional errors and consistent infrastructure performance. However, a latency warning was triggered due to high response time outliers—max response time was 2.5x higher than p95, indicating occasional spikes. Infrastructure health was stable with low CPU and moderate memory usage. Security assessment returned a warning due to the absence of any configured or assessed controls; no runtime checks were performed. No relevant historical run or incident context was available.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /comments?postId=1 [WARNING / medium]
avg=479.424791086351ms p95=1382.0ms max=3502.0ms throughput=11.391156111911029 req/s error_rate=0.0% http_status=200
* Max response time (3502.0ms) is 2.5x p95 (1382.0ms) -- outlier spikes present.
history: Historical context is unavailable for this API/scenario; threshold breach is based on current run only.
recommendation: Investigate cause of occasional high-latency outliers (max response 3502ms, 2.5x higher than p95). No relevant historical incident or runbook identified. If spikes persist in future runs, consider setting a stricter max response time threshold for early alerting.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 9.9% Memory usage: 66.35% DB connections: None TPS: 11.391156111911029
Response time (monitoring): 479.424791086351ms

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-22d21f9106344aa2b6a57392a842ef30.
Live security check: not requested.
Issues:

- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- No security control was selected from the objective; no control was assessed.
Control coverage: {'requested_count': 0, 'assessed_count': 0, 'not_assessed_count': 0}
Assessment limitations:
- No security control was selected from the objective; no control was assessed.
- No runtime security checks were performed; results describe configuration declarations only.

Recommended Next Steps

- /comments?postId=1: Investigate cause of occasional high-latency outliers (max response 3502ms, 2.5x higher than p95). No relevant historical incident or runbook identified. If spikes persist in future runs, consider setting a stricter max response time threshold for early alerting.
- Security: address the issues/recommendations listed above before next deployment.
