Test Case / Original Request

Run PTC-005 using Jmeter. Execute the real performance test and collect monitoring results. Assess the security surface for the same job and exact configured target.Analyze the current job’s results and generate the final PDF with security coverage and evidence, plus links to the native JMeter report, raw results, and final PDF.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Task Status API — Load Check
Job ID: JOB-2ccb7d63a3df433d8ba4673e35a5c9b9
Overall Result: WARNING

The performance test completed successfully with no failed requests or errors, but exhibited significant response time spikes—maximum response time exceeded the p95 value by over 13x, indicating some outlier delays among otherwise passing metrics. Infrastructure health was good, with moderate system resource usage and all monitoring checks passing. Security coverage was incomplete due to a failed live external surface observation for the API, resulting in a warning status for security in this run.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: jmeter
- target_url: https://jsonplaceholder.typicode.com
- endpoint: /todos/1
- method: GET
- users: 25
- max_rps: 15
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000

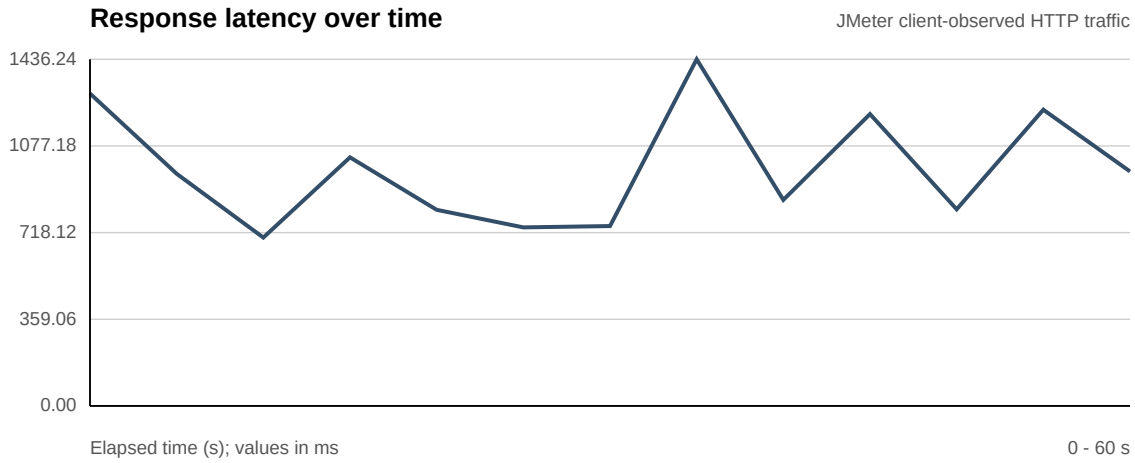
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

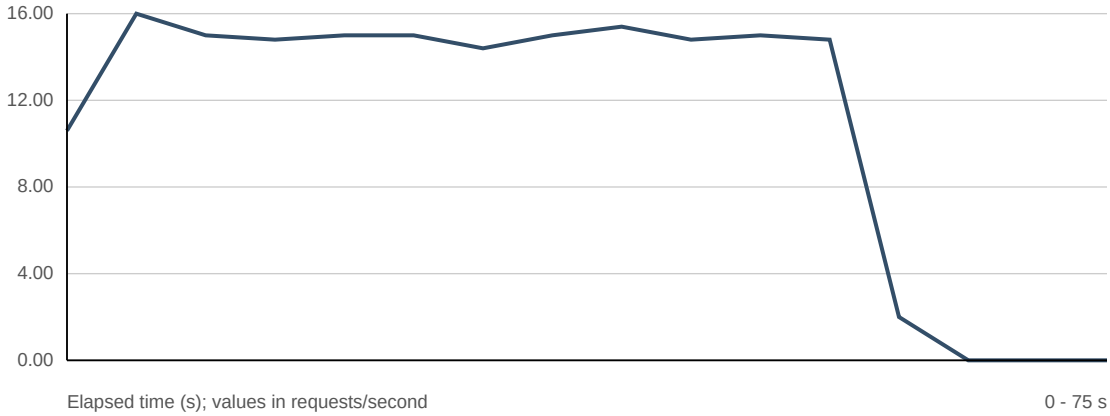
Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.



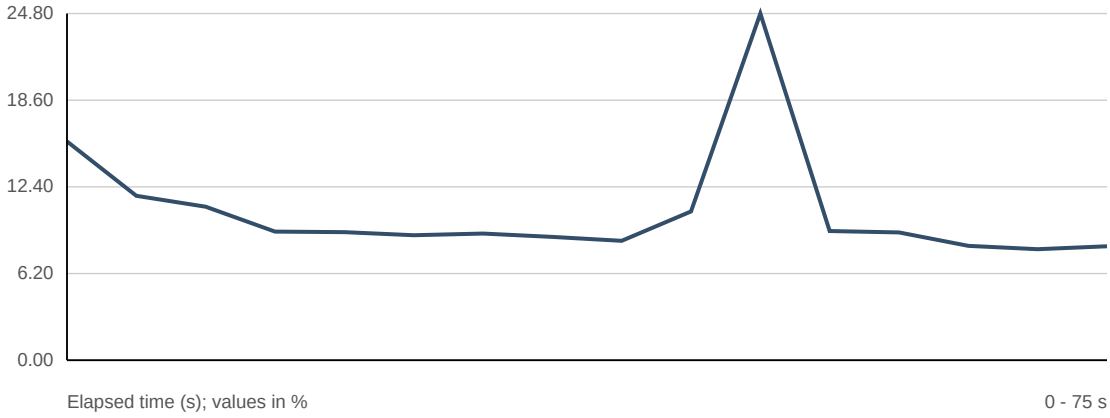
Throughput over time

JMeter client-observed HTTP traffic



Load-generator host CPU over time

psutil load-generator host



Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /todos/1 (Unknown - Task Status API — Load Check). Results: 889 total requests, 889 successful, 0 failed. Avg response time: 977.1687289088864 ms; 95th percentile: 2831.0 ms; Max: 38029.0 ms. Throughput: 11.255778088073432 TPS; Error rate: 0.0%. Latency percentiles (ms): p50=397.0, p90=1971.0, p95=2831.0, p99=6371.0

Agent	*Summary*
Monitoring	CPU usage: 10.61% average, 26.1% peak; memory: 70.01% average, 71.5% peak; DB connections: not collected, TPS: 11.255778088073432, Response time: 977.1687289088864 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). No alerts triggered.
Security Validation	Status: WARNING. Security score: N/A. Live security check: failed. Issue: The external API surface observation did not complete, so no response-security findings are claimed. Issue: external_surface was not assessed; missing evidence: HTTP request timed out after 5 seconds.. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: Authorized live security observation failed: HTTP request timed out after 5 seconds. Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1} Control assessment evidence: - external_surface: not_assessed; basis=live_observation; evidence=[] Assessment limitations: - HTTP request timed out after 5 seconds. - The requested live security observation did not complete.
Analysis	The performance test completed successfully with no failed requests or errors, but exhibited significant response time spikes—maximum response time exceeded the p95 value by over 13x, indicating some outlier delays among otherwise passing metrics. Infrastructure health was good, with moderate system resource usage and all monitoring checks passing. Security coverage was incomplete due to a failed live external surface observation for the API, resulting in a warning status for security in this run.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /todos/1 [WARNING / medium]
avg=977.1687289088864ms p95=2831.0ms max=38029.0ms throughput=11.255778088073432 req/s error_rate=0.0% http_status=200

* Max response time (38029.0ms) is 13.4x p95 (2831.0ms) -- outlier spikes present.
history: No historical or SLA/postmortem context was available for this API/scenario; static threshold analysis only was used.
recommendation: Investigate potential causes for extreme response time spikes. No documented historical incidents or runbooks are available for this threshold breach at present.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 10.61% Memory usage: 70.01% DB connections: None TPS: 11.255778088073432
Response time (monitoring): 977.1687289088864ms

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-2ccb7d63a3df433d8ba4673e35a5c9b9.
Live security check: failed.
Issues:
- The external API surface observation did not complete, so no response-security findings are claimed.
- external_surface was not assessed; missing evidence: HTTP request timed out after 5 seconds..
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- Authorized live security observation failed: HTTP request timed out after 5 seconds.
Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1}
Requested controls: external_surface
Not assessed controls: external_surface
Control evidence and provenance:
- external_surface: not_assessed; basis=live_observation; evidence fields=[]; references=[]
Live observation: HEAD /todos/1; HTTP None; elapsed None ms; requests sent 1.
Assessment limitations:
- HTTP request timed out after 5 seconds.
- The requested live security observation did not complete.

Recommended Next Steps

- /todos/1: Investigate potential causes for extreme response time spikes. No documented historical incidents or runbooks are available for this threshold breach at present.
- Security: address the issues/recommendations listed above before next deployment.
