Test Case / Original Request

Launch PTC-006 using JMeter and monitor its execution. Review the security surface at the test case's configured target, analyze the job results, and produce the PDF with native and raw-result links.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Product Catalog API — Load Check
Job ID: JOB-5360a7c5f5294439bca1815bb5a6b180
Overall Result: WARNING

The Product Catalog API test completed successfully with very strong overall metrics: no errors, OK infrastructure health, and full security controls present on the live observed response. One API warning was detected regarding sporadic outlier spikes in max response time (significantly above the 95th percentile), though overall latency remained well below threshold and there was no impact on error rate or throughput. Infrastructure usage was modest, and host telemetry matched observed client performance. Security posture as tested was clean, although live-test coverage is limited by methodology. No actionable incidents identified, but spikes should be monitored in future.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: jmeter
- target_url: https://dummyjson.com
- endpoint: /products/1
- method: GET
- users: 45
- max_rps: 20
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000

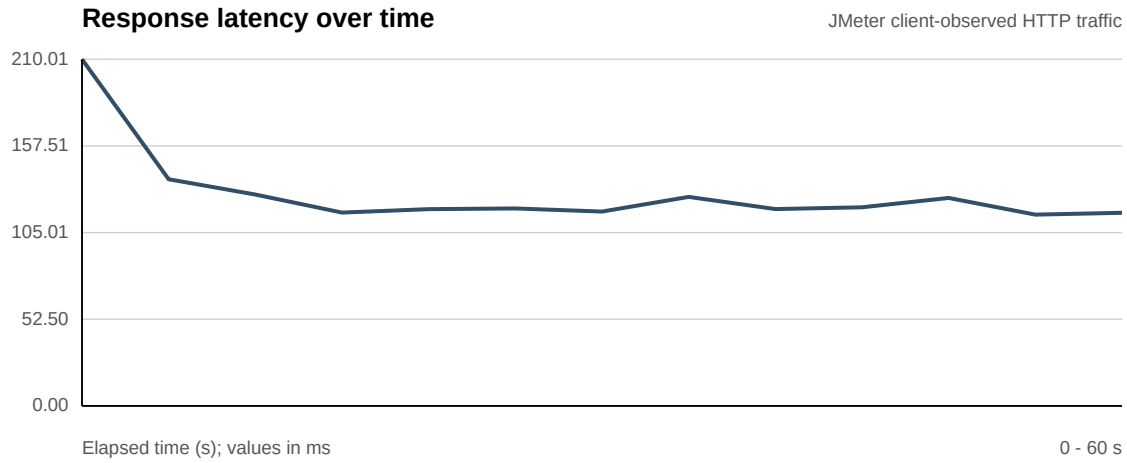
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

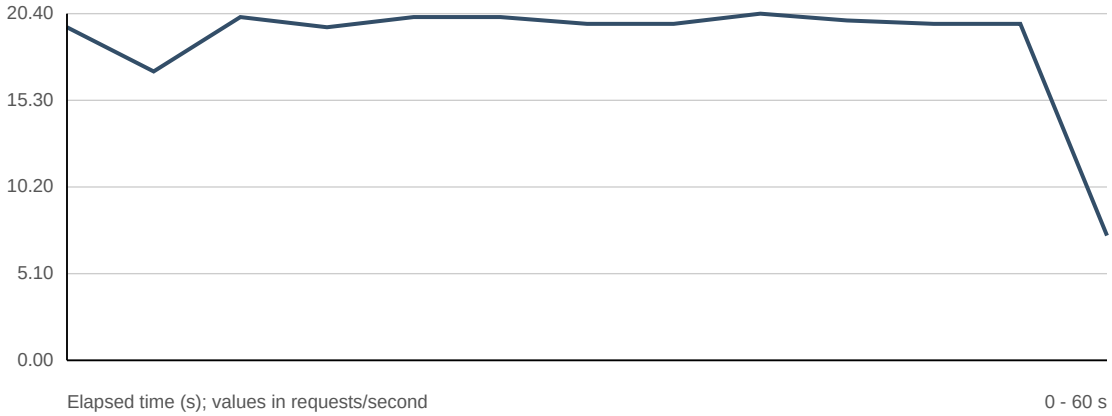
Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.



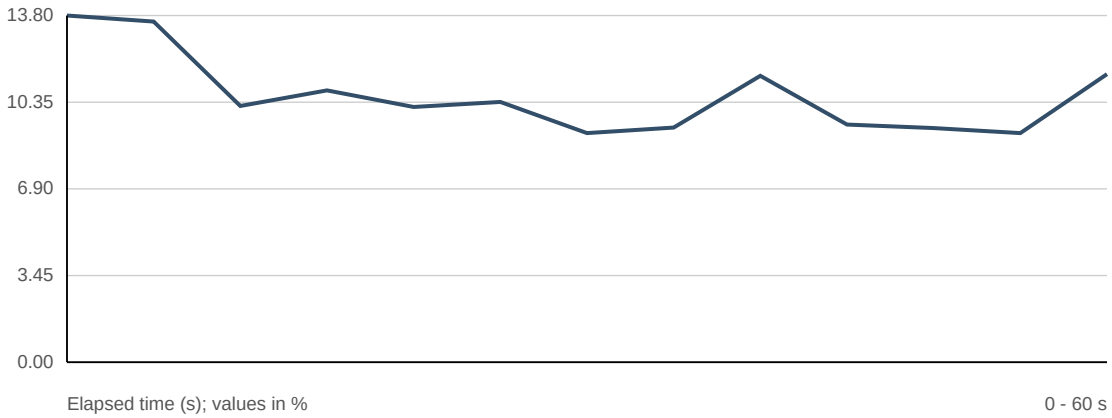
Throughput over time

JMeter client-observed HTTP traffic



Load-generator host CPU over time

psutil load-generator host



Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /products/1 (Unknown - Product Catalog API — Load Check). Results: 1,199 total requests, 1,199 successful, 0 failed. Avg response time: 129.37030859049207 ms; 95th percentile: 222.0 ms; Max: 1018.0 ms. Throughput: 19.240871307898296 TPS; Error rate: 0.0%. Latency percentiles (ms): p50=109.0, p90=185.0, p95=222.0, p99=410.0

Agent	*Summary*
Monitoring	CPU usage: 10.55% average, 18.0% peak; memory: 67.66% average, 69.1% peak; DB connections: not collected, TPS: 19.240871307898296, Response time: 129.37030859049207 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). No alerts triggered.
Security Validation	Status: PASS. Security score: 100%. Live security check: completed. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: Live HEAD observation completed with HTTP status 200; response headers are observations only, not proof of control effectiveness. Control coverage: {'requested_count': 1, 'assessed_count': 1, 'not_assessed_count': 0} Control assessment evidence: - external_surface: assessed; basis=live_observation; evidence=['live-observation:JOB-5360a7c5f5294439bca1815bb5a6b180'] Evidence references: live-observation:JOB-5360a7c5f5294439bca1815bb5a6b180
Analysis	The Product Catalog API test completed successfully with very strong overall metrics: no errors, OK infrastructure health, and full security controls present on the live observed response. One API warning was detected regarding sporadic outlier spikes in max response time (significantly above the 95th percentile), though overall latency remained well below threshold and there was no impact on error rate or throughput. Infrastructure usage was modest, and host telemetry matched observed client performance. Security posture as tested was clean, although live-test coverage is limited by methodology. No actionable incidents identified, but spikes should be monitored in future.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /products/1 [WARNING / medium]
avg=129.37030859049207ms p95=222.0ms max=1018.0ms throughput=19.240871307898296 req/s error_rate=0.0% http_status=200
* Max response time (1018.0ms) is 4.6x p95 (222.0ms) -- outlier spikes present.
history: Historical context is unavailable; assessment is based solely on the static threshold breach (max response time outlier versus p95).

recommendation: Investigate root cause of response time spikes at /products/1. While throughput and error rate remained healthy, monitor for any signs of worsening spikes or escalating latency in future runs.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 10.55% Memory usage: 67.66% DB connections: None TPS: 19.240871307898296
Response time (monitoring): 129.37030859049207ms

Security Findings (Security Agent)

Status: PASS Security score: 100%
Security result job ID: JOB-5360a7c5f5294439bca1815bb5a6b180.
Live security check: completed.
Issues:
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- Live HEAD observation completed with HTTP status 200; response headers are observations only, not proof of control effectiveness.
Control coverage: {'requested_count': 1, 'assessed_count': 1, 'not_assessed_count': 0}
Requested controls: external_surface
Assessed controls: external_surface
Control evidence and provenance:
- external_surface: assessed; basis=live_observation; evidence fields=['target_origin', 'endpoint', 'method', 'response_status_code', 'observed_security_headers']; references=['live-observation:JOB-5360a7c5f5294439bca1815bb5a6b180']
Evidence references: live-observation:JOB-5360a7c5f5294439bca1815bb5a6b180
Live observation: HEAD /products/1; HTTP 200; elapsed 354.1767089627683 ms; requests sent 1.
Observed response headers (observations only):
- strict-transport-security: max-age=15552000; includeSubDomains
- x-content-type-options: nosniff
- x-frame-options: SAMEORIGIN
- cache-control: no-store

Recommended Next Steps

- /products/1: Investigate root cause of response time spikes at /products/1. While throughput and error rate remained healthy, monitor for any signs of worsening spikes or escalating latency in future runs.
