Test Case / Original Request

Execute PTC-008 through JMeter. Capture monitoring, assess the same API’s security surface, analyze the combined job evidence, and generate the final PDF report with relevant artifact links.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Recipe Details API — Load Check
Job ID: JOB-7a5fdca792b04eb3bb7b32096851bb2f
Overall Result: WARNING

The Recipe Details API — Load Check completed successfully, with performance metrics showing no threshold breaches or anomalies: all requests succeeded, response times were within expected range, and the observed throughput matched expectations. Infrastructure monitoring confirmed healthy CPU and memory usage with no alerts. However, the security assessment resulted in a warning because crucial configuration evidence for API security could not be assessed due to missing profile evidence. Further action to provide this evidence is recommended to remove this security warning.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.
