Test Case / Original Request

Run PTC-006 using JMeter, monitor it, assess security, analyze the findings, and create a report.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. Configured thresholds passed.
Process exit code: 0
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Product Catalog API — Load Check
Job ID: JOB-81402353fe7d4e348d19d043fdf31781
Overall Result: WARNING

Test execution completed successfully with no failed requests and low latency, though a warning was issued due to isolated high-latency outliers (max response time is 2.9x the 95th percentile). Infrastructure health status is WARNING owing to high memory usage detected on the load generator host. Security assessment completed with WARNING—only a single HEAD request was observed, so effectiveness of some controls could not be proven. No historical comparison is available for this scenario at this time; recommendations are based on static threshold analysis.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: jmeter
- target_url: https://dummyjson.com
- endpoint: /products/1
- method: GET
- users: 45
- max_rps: 20
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000

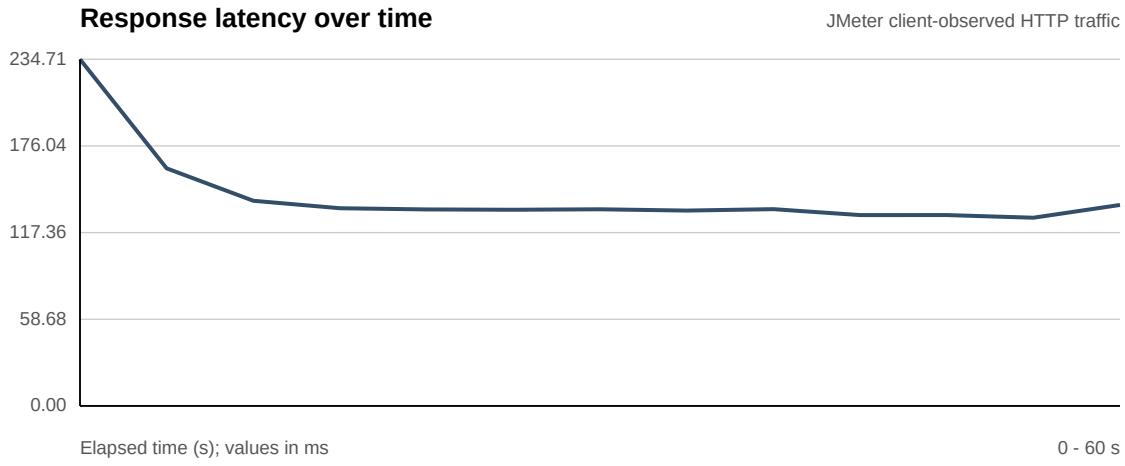
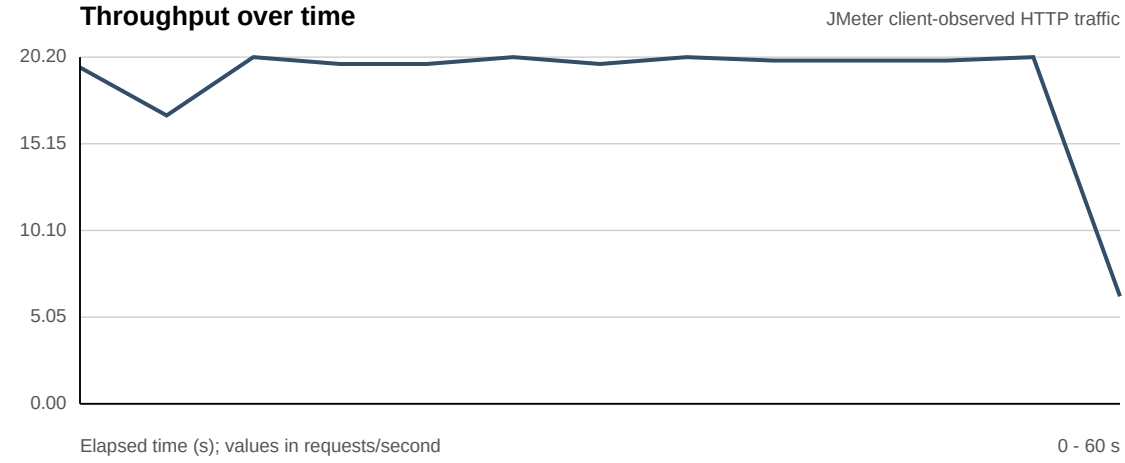
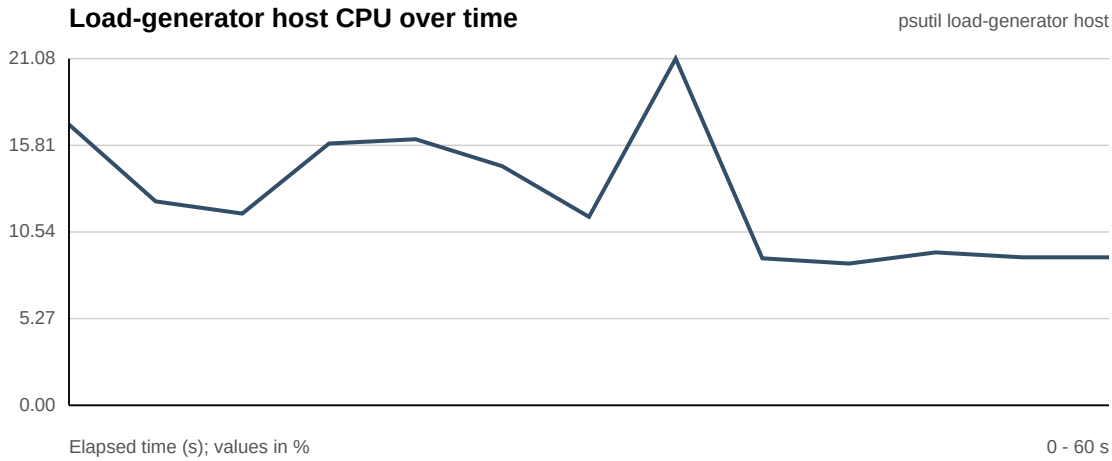
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /products/1 (Unknown - Product Catalog API — Load Check). Results: 1,197 total requests, 1,197 successful, 0 failed. Avg response time: 142.74185463659148 ms; 95th percentile: 215.0 ms; Max: 632.0 ms. Throughput: 19.233463424190578 TPS; Error rate: 0.0%. Latency percentiles (ms): p50=126.0, p90=187.0, p95=215.0, p99=451.0
Monitoring	CPU usage: 12.82% average, 35.8% peak; memory: 80.07% average, 81.5% peak; DB connections: not collected, TPS: 19.233463424190578, Response time: 142.74185463659148 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). Alerts triggered: ['High load-generator host memory usage']

Agent	*Summary*
Security Validation	Status: WARNING. Live security check: completed. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: Live HEAD observation completed with HTTP status 200; response headers are observations only, not proof of control effectiveness. Control coverage: {'requested_count': 1, 'assessed_count': 1, 'not_assessed_count': 0} Control assessment evidence: - external_surface: assessed; basis=live_observation; evidence=['live-observation:JOB-81402353fe7d4e348d19d043fdf31781'] Evidence references: live-observation:JOB-81402353fe7d4e348d19d043fdf31781
Analysis	Test execution completed successfully with no failed requests and low latency, though a warning was issued due to isolated high-latency outliers (max response time is 2.9x the 95th percentile). Infrastructure health status is WARNING owing to high memory usage detected on the load generator host. Security assessment completed with WARNING—only a single HEAD request was observed, so effectiveness of some controls could not be proven. No historical comparison is available for this scenario at this time; recommendations are based on static threshold analysis.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /products/1 [WARNING / medium]
avg=142.74185463659148ms p95=215.0ms max=632.0ms throughput=19.233463424190578 req/s error_rate=0.0% http_status=200
* Max response time (632.0ms) is 2.9x p95 (215.0ms) -- outlier spikes present.
history: Historical context not available for this API/scenario at this time; relying on static threshold breach (outlier spikes detected).
recommendation: Review application and infrastructure logs for root causes of sporadic high-latency outliers. No SLA or incident documentation was available, so base further actions on the max-p95 threshold breach.

Infrastructure Health (Monitoring)

Status: WARNING (monitoring_agent reported: WARNING)
CPU usage: 12.82% Memory usage: 80.07% DB connections: None TPS: 19.233463424190578
Response time (monitoring): 142.74185463659148ms
- 1 monitoring alert(s) reported: ['High load-generator host memory usage']
Monitoring alerts: ['High load-generator host memory usage']

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-81402353fe7d4e348d19d043fdf31781.
Live security check: completed.

Issues:
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- Live HEAD observation completed with HTTP status 200; response headers are observations only, not proof of control effectiveness.
Control coverage: {'requested_count': 1, 'assessed_count': 1, 'not_assessed_count': 0}
Requested controls: external_surface
Assessed controls: external_surface
Control evidence and provenance:
- external_surface: assessed; basis=live_observation; evidence fields=['target_origin', 'endpoint', 'method', 'response_status_code', 'observed_security_headers']; references=['live-observation:JOB-81402353fe7d4e348d19d043fdf31781']
Evidence references: live-observation:JOB-81402353fe7d4e348d19d043fdf31781
Live observation: HEAD /products/1; HTTP 200; elapsed 450.52279194351286 ms; requests sent 1.
Observed response headers (observations only):
- strict-transport-security: max-age=15552000; includeSubDomains
- x-content-type-options: nosniff
- x-frame-options: SAMEORIGIN
- cache-control: no-store

Recommended Next Steps

- /products/1: Review application and infrastructure logs for root causes of sporadic high-latency outliers. No SLA or incident documentation was available, so base further actions on the max-p95 threshold breach.
- Infrastructure: review CPU/memory/DB connection anomalies above.
- Security: address the issues/recommendations listed above before next deployment.
