Test Case / Original Request

Run PTC-010 with JMeter and gather monitoring results. Ask Security to assess the configured target, then analyze the findings and generate the final PDF with links to the native report and raw data.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL JMeter execution completed. One or more configured thresholds failed; see threshold_failures.
Process exit code: 0
Thresholds passed: False
Threshold failures: ['3 of 900 requests failed or returned a status other than 200.']

Executive Summary

Application: Unknown
Scenario: Customer Comment API — Load Check
Job ID: JOB-f5e33dce039d4fd3ae219dd518c6488c
Overall Result: FAIL

The test completed with a critical performance finding: the error rate (reported as 33.33%) significantly exceeded the 1.0% threshold, and isolated latency spikes were observed well above p95 levels. Infrastructure health was reported as acceptable, with moderate CPU and memory usage and no infra anomalies. Security assessment was incomplete—the required live API surface evaluation did not run, resulting in a WARNING for security. No historical context was available to further interpret the severity. Please review the findings for threshold violations and consult relevant runbooks where necessary.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: jmeter

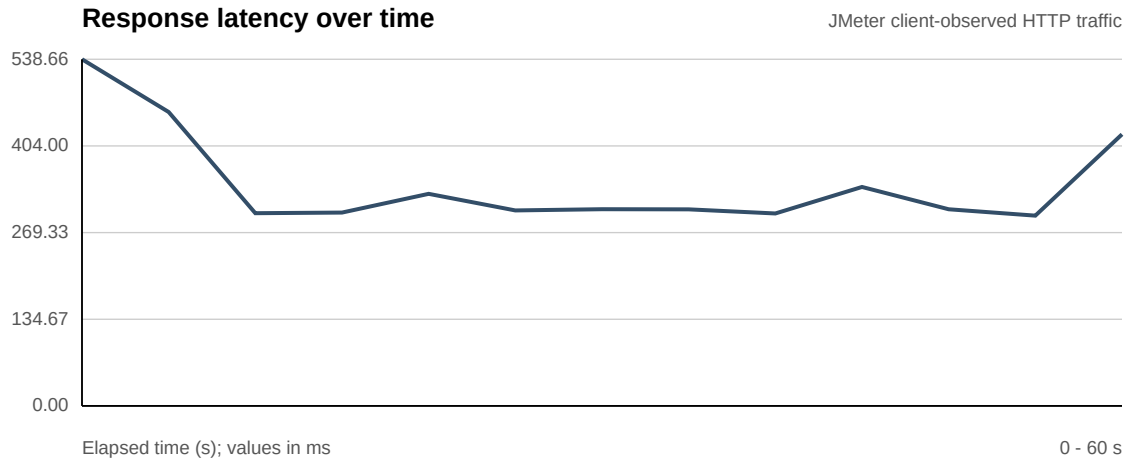
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

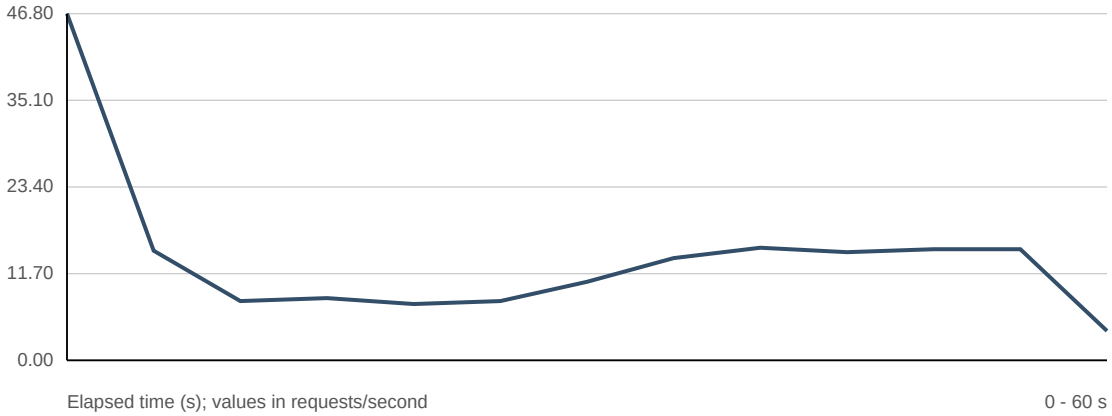
Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.



Throughput over time

JMeter client-observed HTTP traffic

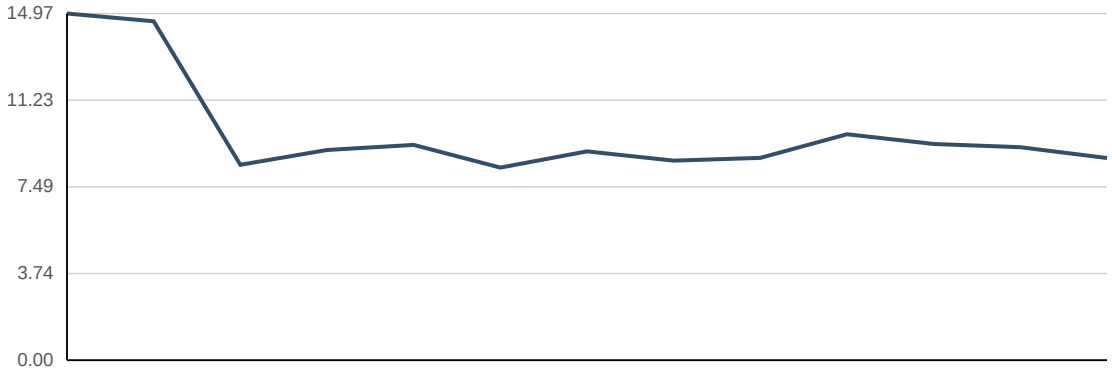


Elapsed time (s); values in requests/second

0 - 60 s

Load-generator host CPU over time

psutil load-generator host



Elapsed time (s); values in %

0 - 60 s

Agent Activity Summary

Agent	***Summary***
Test Execution	Load test executed on /comments/1 (Unknown - Customer Comment API — Load Check). Results: 900 total requests, 897 successful, 3 failed. Avg response time: 381.8822222222222 ms; 95th percentile: 594 ms; Max: 3784 ms. Throughput: 14.337977522430792 TPS; Error rate: 33.33%. Latency percentiles (ms): p50=306, p90=517, p95=594, p99=1000

Agent	*Summary*
Monitoring	CPU usage: 9.81% average, 22.4% peak; memory: 69% average, 69.9% peak; DB connections: not collected, TPS: 14.337977522430792, Response time: 381.8822222222222 ms. Data source and scope: REAL: psutil load-generator host samples and jmeter client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=jmeter (load_generator_observed_http_traffic); tps=jmeter (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.); total_requests=jmeter JTL (load_generator_observed_http_traffic); failed_requests=jmeter JTL (load_generator_observed_http_traffic); error_rate_pct=jmeter JTL (load_generator_observed_http_traffic); latency_percentiles_ms=jmeter JTL (load_generator_observed_http_traffic). No alerts triggered.
Security Validation	Status: WARNING. Security score: N/A. Live security check: not assessed. Issue: The external API surface observation did not complete, so no response-security findings are claimed. Issue: external_surface was not assessed; missing evidence: No authorized external surface observation was completed.. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: Live security check was requested, but no live result was recorded. Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1} Control assessment evidence: - external_surface: not_assessed; basis=live_observation; evidence=[] Assessment limitations: - No authorized external surface observation was completed. - No runtime security checks were performed; results describe configuration declarations only. - The requested live security observation did not complete.
Analysis	The test completed with a critical performance finding: the error rate (reported as 33.33%) significantly exceeded the 1.0% threshold, and isolated latency spikes were observed well above p95 levels. Infrastructure health was reported as acceptable, with moderate CPU and memory usage and no infra anomalies. Security assessment was incomplete—the required live API surface evaluation did not run, resulting in a WARNING for security. No historical context was available to further interpret the severity. Please review the findings for threshold violations and consult relevant runbooks where necessary.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /comments/1 [FAIL / critical]
avg=381.8822222222222ms p95=594ms max=3784ms throughput=14.337977522430792 req/s error_rate=33.33% http_status=200
* Error rate 33.33% exceeds 1.0% threshold.
* Max response time (3784.0ms) is 6.4x p95 (594.0ms) -- outlier spikes present.
history: No historical RAG context was available. Threshold breach only; unable to determine if this result is consistent with or worse than past runs.
recommendation: Investigate the sources of elevated error rate and latency outliers; consult runbook and error diagnostics as the error rate exceeded accepted limits and outlier spikes were observed. No historical or incident guidance was available.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 9.81% Memory usage: 69% DB connections: None TPS: 14.337977522430792 Response time (monitoring): 381.8822222222222ms

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-f5e33dce039d4fd3ae219dd518c6488c.
Live security check: not assessed.
Issues:
- The external API surface observation did not complete, so no response-security findings are claimed.
- external_surface was not assessed; missing evidence: No authorized external surface observation was completed..
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- Live security check was requested, but no live result was recorded.
Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1}
Requested controls: external_surface
Not assessed controls: external_surface
Control evidence and provenance:
- external_surface: not_assessed; basis=live_observation; evidence fields=[]; references=[]
Assessment limitations:
- No authorized external surface observation was completed.
- No runtime security checks were performed; results describe configuration declarations only.
- The requested live security observation did not complete.

Recommended Next Steps

- /comments/1: Investigate the sources of elevated error rate and latency outliers; consult runbook and error diagnostics as the error rate exceeded accepted limits and outlier spikes were observed. No historical or incident guidance was available.
- Security: address the issues/recommendations listed above before next deployment.
