Test Case / Original Request

Run PTC-004 using K6. Execute the real performance test and collect monitoring results. Assess the security surface for the same job and exact configured target.Analyze the current job’s results and generate the final PDF with security coverage and evidence, plus links to the native JMeter report, raw results, and final PDF

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL k6 execution completed. Threshold breaches, if any, are retained as performance findings.
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Filtered Feedback API — Load Check
Job ID: JOB-18b8e33adcd44ddfb0e4175a62251df5
Overall Result: WARNING

The test execution completed successfully, with performance metrics collected for '/comments?postId=1' showing high latency variance and outlier spikes (p95 and max response times breached thresholds), although all requests succeeded. Infrastructure health was within acceptable limits, with normal CPU and memory usage and no monitoring alerts. Security assessment resulted in a WARNING status due to missing live security testing, as these were disabled by deployment configuration; no direct security issues were confirmed or denied for the API. Please refer to the team's runbook for latency troubleshooting.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:
- tool: k6
- target_url: https://jsonplaceholder.typicode.com
- endpoint: /comments?postId=1
- method: GET
- users: 20
- max_rps: 12
- duration_seconds: 60
- ramp_up_seconds: 5
- expected_status_code: 200
- p95_threshold_ms: 5000
Artifact directory: src/generated_scripts/k6 native reports/JOB-18b8e33adcd44ddfb0e4175a62251df5

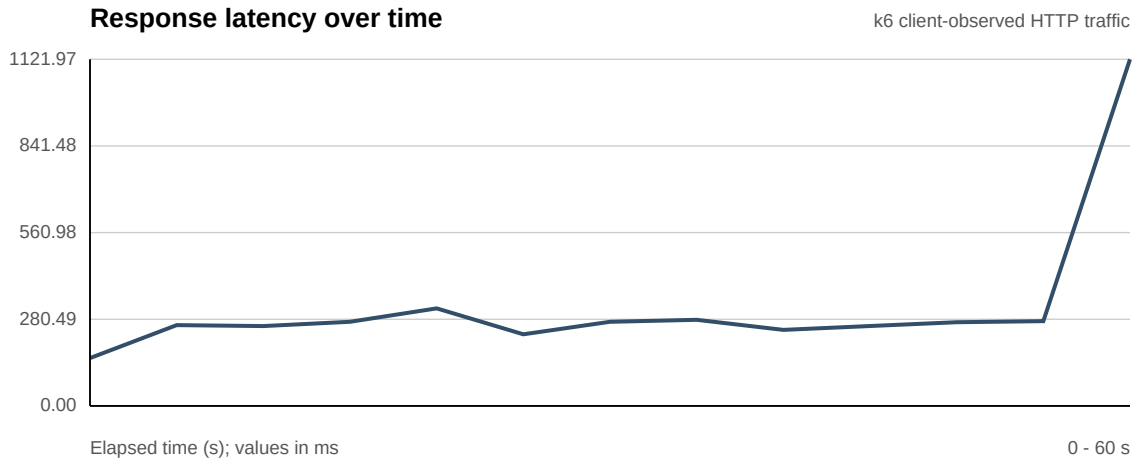
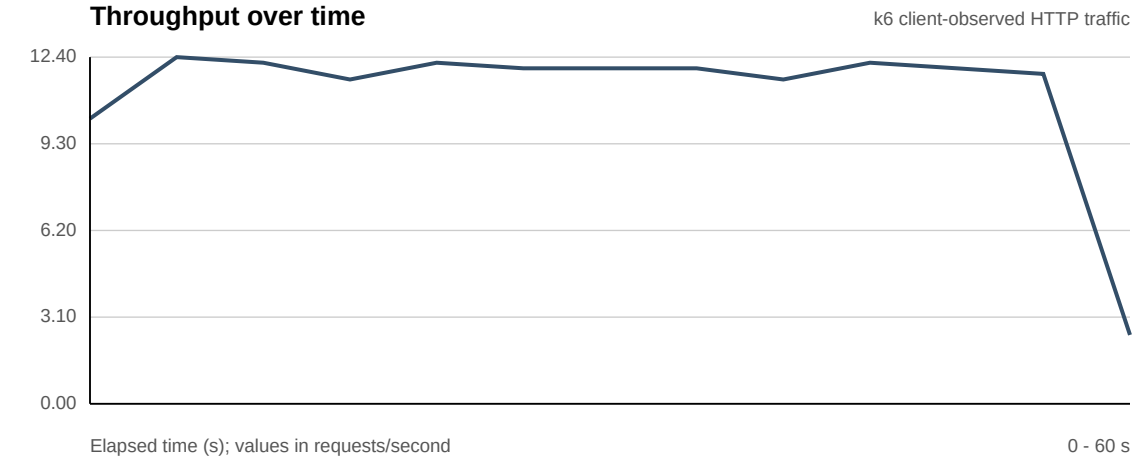
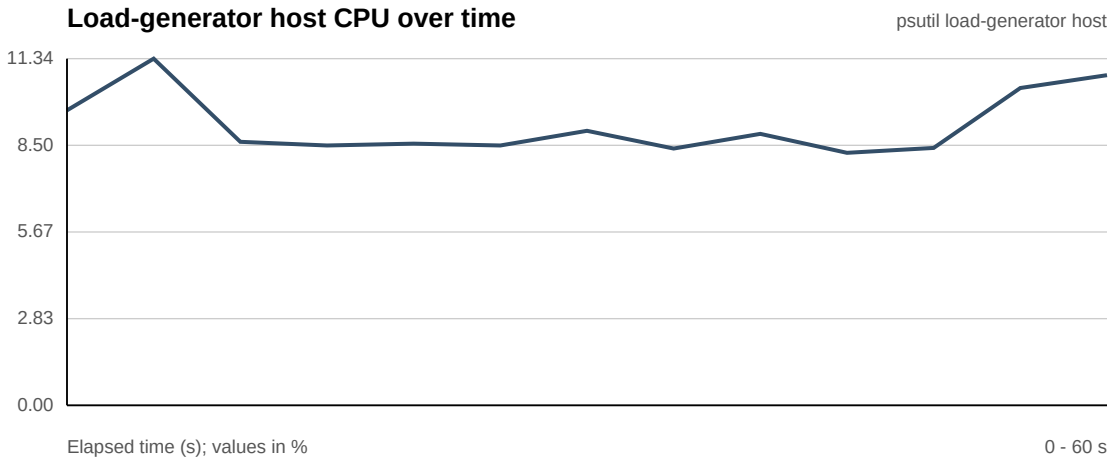
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /comments?postId=1 (Unknown - Filtered Feedback API — Load Check). Results: 712 total requests, 712 successful, 0 failed. Avg response time: 260.55498876404494 ms; 95th percentile: 1043.41085 ms; Max: 2424.62 ms. Throughput: 11.797035842311011 TPS; Error rate: 0.0%.
Monitoring	CPU usage: 9.06% average, 15.9% peak; memory: 77.06% average, 78.2% peak; DB connections: not collected, TPS: 11.797035842311011, Response time: 260.55498876404494 ms. Data source and scope: REAL: psutil load-generator host samples and k6 client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=k6 (load_generator_observed_http_traffic); tps=k6 (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.). No alerts triggered.

Agent	*Summary*
Security Validation	Status: WARNING. Live security check: not assessed. Issue: The external API surface observation did not complete, so no response-security findings are claimed. Issue: external_surface was not assessed; missing evidence: Live security checks are disabled by trusted deployment configuration.. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: Requested live security check was blocked: Live security checks are disabled by trusted deployment configuration. Issue: No matching application security profile: No versioned profile matches the trusted application, environment, target origin, endpoint, and method. Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1} Control assessment evidence: - external_surface: not_assessed; basis=live_observation; evidence=[] Assessment limitations: - Live security checks are disabled by trusted deployment configuration. - No versioned profile matches the trusted application, environment, target origin, and method. - No runtime security checks were performed; results describe configuration declarations only. - The requested live security observation did not complete.
Analysis	The test execution completed successfully, with performance metrics collected for '/comments?postId=1' showing high latency variance and outlier spikes (p95 and max response times breached thresholds), although all requests succeeded. Infrastructure health was within acceptable limits, with normal CPU and memory usage and no monitoring alerts. Security assessment resulted in a WARNING status due to missing live security testing, as these were disabled by deployment configuration; no direct security issues were confirmed or denied for the API. Please refer to the team's runbook for latency troubleshooting.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /comments?postId=1 [WARNING / high]
avg=260.55498876404494ms p95=1043.41085ms max=2424.62ms throughput=11.797035842311011 req/s error_rate=0.0% http_status=200
* p95 (1043.41085ms) is 4.0x the average (260.55498876404494ms) -- wide latency variance / possible tail contention.
* Max response time (2424.62ms) is 2.3x p95 (1043.41085ms) -- outlier spikes present.
history: Historical context is unavailable; no comparable prior runs, SLAs, or postmortems could be retrieved. This warning is based on current threshold breaches only.
recommendation: Investigate root causes for high latency variance and response time outliers. Refer to the team's runbook for handling p95 or max latency deviations, or monitor future runs for repeated occurrences.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 9.06% Memory usage: 77.06% DB connections: None TPS: 11.797035842311011
Response time (monitoring): 260.55498876404494ms

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-18b8e33adcd44ddfb0e4175a62251df5.
Live security check: not assessed.
Issues:
- The external API surface observation did not complete, so no response-security findings are claimed.
- external_surface was not assessed; missing evidence: Live security checks are disabled by trusted deployment configuration..
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- Requested live security check was blocked: Live security checks are disabled by trusted deployment configuration.
- No matching application security profile: No versioned profile matches the trusted application, environment, target origin, endpoint, and method.
Control coverage: {'requested_count': 1, 'assessed_count': 0, 'not_assessed_count': 1}
Requested controls: external_surface
Not assessed controls: external_surface
Control evidence and provenance:
- external_surface: not_assessed; basis=live_observation; evidence fields=[]; references=[]
Live observation: unknown unknown endpoint; HTTP unavailable; elapsed unavailable ms; requests sent 0.
Assessment limitations:
- Live security checks are disabled by trusted deployment configuration.
- No versioned profile matches the trusted application, environment, target origin, and method.
- No runtime security checks were performed; results describe configuration declarations only.
- The requested live security observation did not complete.

Recommended Next Steps

- /comments?postId=1: Investigate root causes for high latency variance and response time outliers. Refer to the team's runbook for handling p95 or max latency deviations, or monitor future runs for repeated occurrences.
- Security: address the issues/recommendations listed above before next deployment.
