Test Case / Original Request

Perform PTC-005 with the real k6 runner and collect monitoring results. Have Security assess the configured target, then analyze the evidence and generate the final PDF with artifact links.

REAL Execution Outcome

Execution status: COMPLETED
Runner status: completed
Outcome details: REAL k6 execution completed. Threshold breaches, if any, are retained as performance findings.
Thresholds passed: True

Executive Summary

Application: Unknown
Scenario: Task Status API — Load Check
Job ID: JOB-f73918a6c8ae4878b029d2bb5acae5a8
Overall Result: WARNING

Performance testing of the Task Status API completed successfully with no failed requests and healthy infrastructure/resource utilization. However, a warning was raised for wide latency variance and outlier spikes, as the p95 and max response times notably exceeded expected ratios versus the average. Historical context was not available to assess previous behavior or SLA alignment. Security assessment issued a warning due to the absence of actively assessed controls; only static configuration was checked. Overall, while reliability and infra were solid, latency variation and limited security controls require further review.

Execution Profile and Artifacts

Execution mode: REAL
Workload profile:

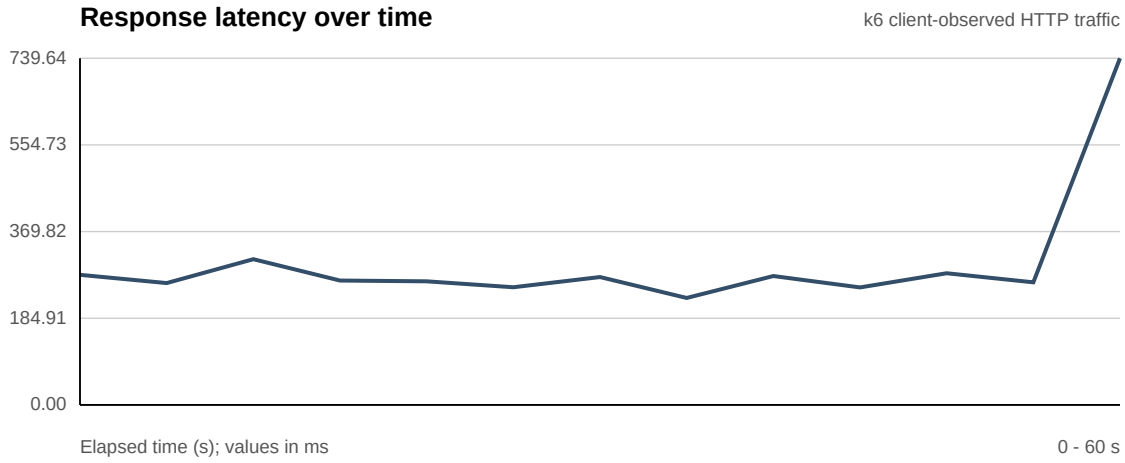
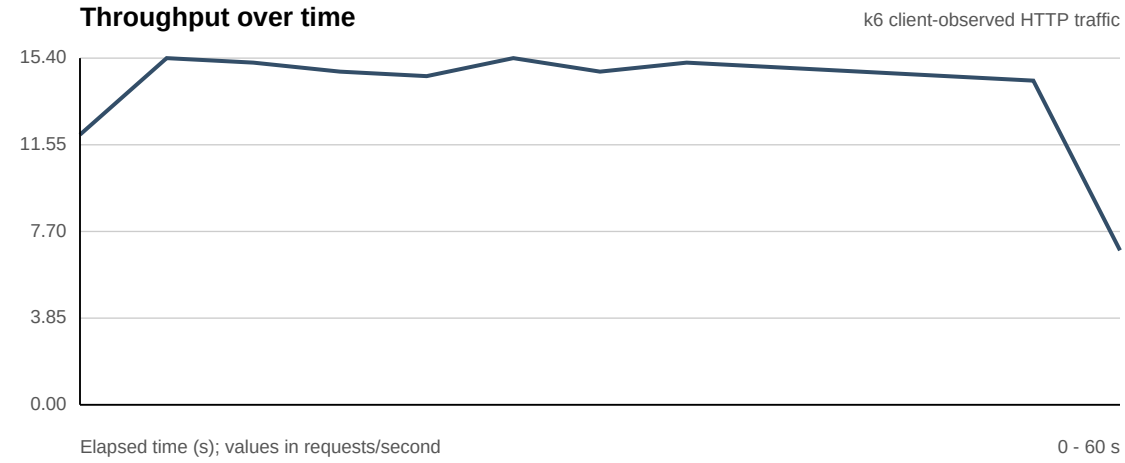
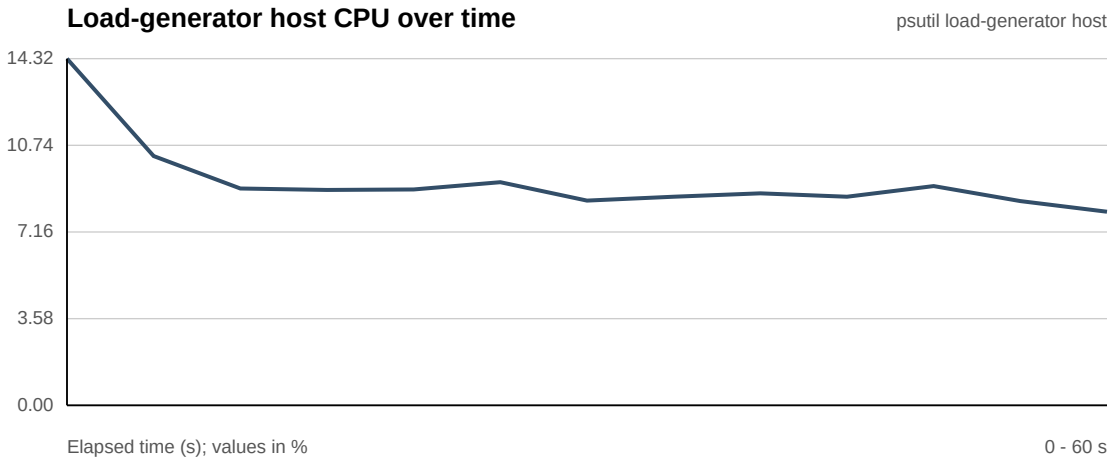
The interactive native HTML dashboard is linked as a separate artifact and is not embedded in this PDF.

Time-Series Charts (REAL Measurements)

Charts show measured values in five-second aligned buckets. Host CPU is from the load-generator machine, not the target.







Agent Activity Summary

Agent	*Summary*
Test Execution	Load test executed on /todos/1 (Unknown - Task Status API — Load Check). Results: 883 total requests, 883 successful, 0 failed. Avg response time: 267.34599886749703 ms; 95th percentile: 1035.4091999999998 ms; Max: 2531.148 ms. Throughput: 14.658190746322362 TPS; Error rate: 0.0%.
Monitoring	CPU usage: 9.28% average, 21.0% peak; memory: 67.09% average, 68.7% peak; DB connections: not collected, TPS: 14.658190746322362, Response time: 267.34599886749703 ms. Data source and scope: REAL: psutil load-generator host samples and k6 client-observed metrics. Measurement provenance: cpu_usage=psutil (load_generator_host); cpu_peak_usage=psutil (load_generator_host); memory_usage=psutil (load_generator_host); memory_peak_usage=psutil (load_generator_host); response_time=k6 (load_generator_observed_http_traffic); tps=k6 (load_generator_observed_http_traffic); db_connections=not_collected (No target-specific database telemetry provider is configured.). No alerts triggered.
Security Validation	Status: WARNING. Security score: N/A. Live security check: not requested. Issue: Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness. Issue: No security control was selected from the objective; no control was assessed. Control coverage: {'requested_count': 0, 'assessed_count': 0, 'not_assessed_count': 0} Assessment limitations: - No security control was selected from the objective; no control was assessed. - No runtime security checks were performed; results describe configuration declarations only.

Agent	*Summary*
Analysis	Performance testing of the Task Status API completed successfully with no failed requests and healthy infrastructure/resource utilization. However, a warning was raised for wide latency variance and outlier spikes, as the p95 and max response times notably exceeded expected ratios versus the average. Historical context was not available to assess previous behavior or SLA alignment. Security assessment issued a warning due to the absence of actively assessed controls; only static configuration was checked. Overall, while reliability and infra were solid, latency variation and limited security controls require further review.
Reporting	A PDF report was generated, including all findings, recommendations, and an executive summary.

Per-API Findings (Test Execution)

- /todos/1 [WARNING / high]
avg=267.34599886749703ms p95=1035.4091999999998ms max=2531.148ms throughput=14.658190746322362 req/s error_rate=0.0% http_status=200
* p95 (1035.4091999999998ms) is 3.9x the average (267.34599886749703ms) -- wide latency variance / possible tail contention.
* Max response time (2531.148ms) is 2.4x p95 (1035.4091999999998ms) -- outlier spikes present.
history: Historical context unavailable; relying on static threshold breach for this analysis.
recommendation: Response time variance exceeded normal thresholds, indicating possible tail latency or resource contention. Review the service's handling of peak and outlier requests, and investigate for sporadic backend issues even in the absence of historical or SLA context.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 9.28% Memory usage: 67.09% DB connections: None TPS: 14.658190746322362
Response time (monitoring): 267.34599886749703ms

Security Findings (Security Agent)

Status: WARNING Security score: N/A
Security result job ID: JOB-f73918a6c8ae4878b029d2bb5acae5a8.
Live security check: not requested.
Issues:
- Scope limitation: configuration validator outcomes describe profile declarations; any live result is a separate single-request observation and does not prove control effectiveness.
- No security control was selected from the objective; no control was assessed.
Control coverage: {'requested_count': 0, 'assessed_count': 0, 'not_assessed_count': 0}
Assessment limitations:
- No security control was selected from the objective; no control was assessed.
- No runtime security checks were performed; results describe configuration declarations only.

Recommended Next Steps

- /todos/1: Response time variance exceeded normal thresholds, indicating possible tail latency or resource contention. Review the service's handling of peak and outlier requests, and investigate for sporadic backend issues even in the absence of historical or SLA context.
- Security: address the issues/recommendations listed above before next deployment.
