Executive Summary

Application: banking application
Scenario: standard performance test scenario
Job ID: JOB-d5a64056
Overall Result: FAIL

The performance test for the banking application's standard scenario revealed a failure due to an elevated error rate (1.81% vs. 1.0% threshold), while overall infrastructure health was reported as OK (no alerts, reasonable resource use). There's a notable (35%) discrepancy between infra and test execution response time reporting, which should be investigated for measurement alignment. No historical context was available, so all recommendations are based solely on static thresholds.

Per-API Findings (Test Execution)

- unknown [FAIL / high]
avg=717.68ms p95=1176.31ms max=1372.68ms throughput=278.82 req/s error_rate=1.81% http_status=200
* Error rate 1.81% exceeds 1.0% threshold.
history: RAG context unavailable; analysis based on threshold breach only.
recommendation: Error rate exceeded 1.0% threshold. No prior historical context is available. Investigate sources of elevated errors and verify if the error rate pattern is new or consistent with previous runs.

Infrastructure Health (Monitoring)

Status: PASS (monitoring_agent reported: OK)
CPU usage: 61.67% Memory usage: 66.08% DB connections: 151.92 TPS: 156.92 Response time (monitoring): 466.25ms
Cross-check: monitoring_agent's response_time (466.25ms) disagrees with test_execution_agent's avg_response_time (717.68ms) by 35% -- worth checking measurement points/clock sync.

Recommended Next Steps

- unknown: Error rate exceeded 1.0% threshold. No prior historical context is available. Investigate sources of elevated errors and verify if the error rate pattern is new or consistent with previous runs.
